AUTHOR Bologna, Jack, Comp.
TITLE Computer Virus Bibliography, 1988-1989.
PUB DATE 8 Dec 89
NOTE 14p.
PUB TYPE Reference Materials - Bibliographies (131)

EDRS PRICE MF01/PC01 Plus Postage.
DESCRIPTORS Books; *Computer Networks; Computers; Computer Software; Electronic Mail; Microcomputers; Newspapers; Periodicals; Prevention; Viruses
IDENTIFIERS Computer Hackers; *Computer Viruses; Data Protection; Data Security

ABSTRACT

This bibliography lists 14 books, 154 journal articles, 34 newspaper articles, and 3 research papers published during 1988-1989 on the subject of computer viruses, software protection and 'cures', virus hackers, and other related issues. Some of the sources listed include Computers and Security, Computer Security Digest, PC Week, Time, the New York Times, and the Washington Post. (DB)

NEWSPAPER ARTICLES

New York Times, (1988, November 5). Computer virus is son of chief of N.S.A. expert of data security.

- . (1988, November 5). Innocence is periled in Computer Eden.
- . (1988, November 5). SRI International repairs damage.
- . (1988, November 5). The letter bomb.
- . (1988, November 6). Carnegie-Mellon University fought off bout of computer virus in some of its computers, I, 58:2.
- . (1988, November 6). Defense Department is questioned about security of military secrets, I, 30:1.
- . (1988, November 6). Friends say Robert T. Morris distraught, I; 1:1.
- . (1988, November 7). Weakness that allowed one of nation's most powerful computer networks to be jammed, II, 10:4.
- . (1988, November 8). FBI begins official criminal investigation of computer "virus", I, 16:1.
- . (1988, November 9). Computer security experts tell representatives of 12 Federal agencies that rogue program that caused computers to jam had no dangerous hidden features, I, 18:1.
- . (1988, November 9). Scientists describe how "virus" program was able to infect many of nation's computer networks, IV, 10:1.
- . (1988, November 13). Computer addiction, III, 9:1.
- . (1988, November 13). Contamination of nationwide Pentagon data network by "virus," IV, 7:1.

- . (1988, November 14). Scientists fear researchers will begin to shun Defense Department's Arpanet network, II, 6:1.
- . (1988, November 15). I, 31:2.
- . (1988, November 18). FBI seizes magnetic tapes and legal pads in search at Cornell University as probe, II, 6:5.
- . (1988, November 19). Computer trespass and other computer crimes are beginning to appear in Japan, I, 4:1.
- . (1988, November 26). Shadowy culture of computer hackers is committed to illegally entering computer networks that American society relies on, I, 1:1.
- . (1989, May 30). Virus outbreaks thwart computer experts; new techniques offer only modest help against epidemics. p. B7(N), p. C1(L).

Wall Street Journal, (1988, April 5).

- . (1989, January 16).

Washington Post, (1988, November 4). Computer virus shuts down thousands of computers through U.S., p. A1c.

- . (1988, November 4). Computer network most likely to produce epidemic related to computer virus, p. A4e.
- . (1988, November 5). Cornell University officials say they have evidence computer virus existed weeks before its detection, p. A1a.
- . (1988, November 5). Experts say virus' spread illustrates problems of computer security, p. A4d.
- . (1988, November 6). FBI to question Robert T. Morris, Jr. in connection with large-scale damaging computer virus, p. A1c.
- . (1988, November 7). Friends say computer virus program proliferated beyond student's control, p. A1a.

- . (1988, November 8). Computer virus problem predicted by science fiction writers, p. C1e.
- . (1988, November 8). FBI launches full probe into computer virus that disabled thousands of computers, p. A1e.
- . (1988, November 9). Electronic vaccines stopped computer virus in some systems when operators received notification in time, p. A1e.
- . (1988, November 17). FBI seizes tapes and notes from Cornell University in probe of computer virus which temporarily incapacitated 6,000 computers nationwide, p. A26a.
- . (1988, December 2). Defense Department cuts link to computer networks after unknown "hacker" gained unauthorized entry to the system, p. A17c.
- . (1988, December 3). Experts say National Computer Security Center was victim in 1986 of small electronic "break-in"; incident demonstrates system's vulnerability to insider violations, p. A4da.
- . (1988, December 18). Hacker who has repeatedly broken into Lawrence Livermore National Laboratory's unclassified computers is identified, to be arrested, p. A20d.
